Bed Assembly

Beds are quick and easy to set up, here are a few steps to follow:

Step 1.

Attaching Bed Rails To Footboard/Headboard

The side rails simply attach to the headboard and footboard by sliding the cast iron bracket over the bolts in the legs and by then tightening the bolts after the rails are in place. It is extremely important to tighten these bolts in order to prevent damage or injury!

Slide the cast iron bracket that is attached to the side rails over the bolts that are on the headboard or footboard. Tighten bolts after bracket is in place.

Step 2.

Add mattress support slats and support legs

Cast iron brackets along with support slats and legs that screw to each of these slats provide an improved but simple mattress support system.
